

Separate Project And Thesis Names

Yes. Your current list mixes **project/system names** with **thesis/research titles**. A thesis title should emphasize a **research problem, methodology, evaluation, framework, comparative analysis, or empirical study**, rather than simply describing a system you will build.

Here is a clean separation:

1. Student Dropout / E-Learning

Project Name	Thesis Name
AI-Based Student Dropout Prediction and Learning Recommendation System	Predicting Student Dropout Risk in E-Learning Environments: A Machine Learning Approach for Bangladeshi Higher Education
Smart Student Risk Monitoring and Recommendation System	An Explainable Machine Learning Approach to Early Student Dropout Prediction and Personalized Learning Recommendation in Bangladesh
Personalized Student Learning and Performance Prediction System	A Machine Learning-Based Framework for Student Performance Prediction and Personalized Learning Recommendation in Bangladeshi Higher Education

Best thesis choice:

An Explainable Machine Learning Approach to Early Student Dropout Prediction and Personalized Learning Recommendation in Bangladesh

Why? It has two strong research components: **explainability + prediction + personalization**, making it more research-oriented than a simple prediction system.

2. E-Commerce — Purchase Intention

Project Name	Thesis Name
Customer Purchase Intention Prediction System for E-Commerce	Machine Learning-Based Customer Purchase Intention Prediction for E-Commerce Platforms in Bangladesh
Explainable Customer Purchase Prediction System	An Explainable Machine Learning Framework for Customer Purchase Intention Prediction in the Bangladeshi E-Commerce Sector
E-Commerce Customer Behavior Analysis System	A Comparative Study of Machine Learning Techniques for Customer Purchase Intention Prediction in the Bangladeshi E-Commerce Market

Best thesis choice:

An Explainable Machine Learning Framework for Customer Purchase Intention Prediction in the Bangladeshi E-Commerce Sector

This is clearly a **research thesis**, especially if you compare models such as Random Forest, XGBoost, Logistic Regression, and explain predictions using SHAP/LIME.

3. E-Commerce — Product Recommendation

Project Name	Thesis Name
Personalized E-Commerce Product Recommendation System	A Machine Learning Approach to Personalized Product Recommendation in the Bangladeshi E-Commerce Market
Smart Product Recommendation and Customer Analysis System	An Explainable Machine Learning Approach to Personalized Product Recommendation and Customer Behavior Analysis in Bangladesh
AI-Based E-Commerce Recommendation System	Comparative Evaluation of Machine Learning Algorithms for Personalized Product Recommendation in the Bangladeshi E-Commerce Market

Best thesis choice:

Comparative Evaluation of Machine Learning Algorithms for Personalized Product Recommendation in the Bangladeshi E-Commerce Market

This is particularly suitable for a university thesis because the **comparison and evaluation itself becomes the research contribution**.

4. E-Commerce — Customer Behavior

Project Name	Thesis Name
Customer Behavior Prediction and Analytics System	Machine Learning-Based Customer Behavior Prediction in the Bangladeshi E-Commerce Market
Smart Customer Behavior Analysis System for E-Commerce	An Explainable Machine Learning Framework for Customer Behavior Prediction in the Bangladeshi E-Commerce Sector
Personalized Customer Engagement System	A Comparative Analysis of Machine Learning Techniques for Customer Behavior Prediction in Bangladeshi E-Commerce

5. E-Commerce — Demand Forecasting

Project Name	Thesis Name
E-Commerce Product Demand Forecasting System	Machine Learning-Based Demand Forecasting for E-Commerce Products in Bangladesh
AI-Based Inventory and Demand Prediction System	A Machine Learning Approach to Product Demand Forecasting for Bangladeshi E-Commerce Platforms
Smart E-Commerce Inventory Prediction System	Comparative Evaluation of Machine Learning Models for E-Commerce Product Demand Forecasting in Bangladesh

Best thesis choice:

Comparative Evaluation of Machine Learning Models for E-Commerce Product Demand Forecasting in Bangladesh

6. Your titles classified

● Strong Thesis Names

1. Predicting Student Dropout Risk in E-Learning Environments: A Machine Learning Approach for Bangladeshi Higher Education
2. An Explainable Machine Learning Approach to Early Student Dropout Prediction and Personalized Learning Recommendation in Bangladesh
3. A Machine Learning-Based Framework for Student Performance Prediction and Personalized Learning Recommendation in Bangladeshi Higher Education
4. An Explainable Machine Learning Framework for Customer Purchase Intention Prediction in the Bangladeshi E-Commerce Sector
5. A Machine Learning Approach to Personalized Product Recommendation and Customer Behavior Prediction in the Bangladeshi E-Commerce Market
6. Comparative Evaluation of Machine Learning Algorithms for Customer Behavior Prediction and Personalized Product Recommendation in the Bangladeshi E-Commerce Market
7. Machine Learning-Based Demand Forecasting for E-Commerce Products in Bangladesh

● More Project/System-like

1. An Intelligent E-Commerce Framework for Personalized Product Recommendation and Customer Behavior Prediction in Bangladesh
2. Machine Learning-Based Customer Purchase Intention Prediction for E-Commerce Platforms in Bangladesh

These aren't necessarily bad, but they can sound like **"I am going to build an application"** rather than **"I am conducting research."**

★ My Top 5 for your CSE Thesis

If your goal is **Web Development + Machine Learning + Bangladesh perspective**, I'd rank them:

🥇 1. E-Commerce — Purchase Intention

An Explainable Machine Learning Framework for Customer Purchase Intention Prediction in the Bangladeshi E-Commerce Sector

Research: Customer data → ML models → purchase prediction → explainability.

🥈 2. E-Commerce — Demand Forecasting

Comparative Evaluation of Machine Learning Models for E-Commerce Product Demand Forecasting in Bangladesh

Research: Historical sales → multiple ML models → demand prediction → performance comparison.

🥉 3. Student Dropout

An Explainable Machine Learning Approach to Early Student Dropout Prediction and Personalized Learning Recommendation in Bangladesh

Research: Student activity/performance → dropout risk → explain why → personalized recommendations.

4. Product Recommendation

Comparative Evaluation of Machine Learning Algorithms for Personalized Product Recommendation in the Bangladeshi E-Commerce Market

5. Student Performance

A Machine Learning-Based Framework for Student Performance Prediction and Personalized Learning Recommendation in Bangladeshi Higher Education

If you want a less common / more research-worthy topic

I'd choose:

An Explainable Machine Learning Framework for Customer Purchase Intention Prediction in the Bangladeshi E-Commerce Sector

rather than simply:

Machine Learning-Based Customer Purchase Intention Prediction...

The word "**Explainable**" gives you a stronger research direction because you can investigate not only **whether the model predicts a purchase**, but also **which factors influence the prediction**.

For your background as a **web-development-focused CSE student**, this also gives you a nice thesis structure: **web-based data collection/visualization + ML prediction + explainable AI + Bangladeshi e-commerce context**.
